PTI Job Posting Requisition

Job Title: Senior Systems Engineer

Location: Indianapolis, IN

Salary: \$70-\$90k

Duration: Contract to Hire

Job Description: Under general supervision, manages the purchase, installation, and support of network communications, including LANs and/or WANs. Works on problems of diverse scope where analysis of situation requires evaluation and judgment. May be responsible for evaluating current systems. Assists in the planning of large scale systems projects through vendor comparison and cost studies. Requires thorough knowledge of LAN/WAN systems, networks and applications. Typically requires a college degree and 2 to 5 years related experience.

Required Skills: Our “client” is leading the way in defining a new class of software and services – enterprise marketing management (EMM). Our products bring marketing efficiency and effectiveness to the next level. Since its inception in 1998, our “client” has been focused on bringing the broadest and deepest set of integrated marketing applications to market. Due to our explosive growth, we are looking to add new talent in our Cloud Services group. We are looking for a Senior System Engineer who will work as a part of a dynamic team in a rapidly growing company. While the role is truly one of an individual contributor, a high degree of interaction and teamwork are required to be effective in the role. The qualified candidate will possess excellent technical and organizational skills. An individual must possess good teamwork, leadership and communication skills. Specific Duties include:

- Design, implement, and manage infrastructure technologies. These technologies are used in the web hosting of the “client’s” marketing application.
- Hands on management of large Microsoft Windows Server, Microsoft SQL Server, SAN, VMware, high availability, production server environment.
- Apply product functionality to directly contribute to our “client’s” Marketing change management processes and systems configuration.

- Be a key contributor in the development and evolution of our “client’s” Cloud Services.
- BS in Computer Science or related discipline preferred • At least 3 years’ experience in virtual server configuration and administration. VMware Certified Professional preferred • At least 6 years’ experience in a systems administration or engineering role. Microsoft Certified Professional Preferred. • Experience in SAN configuration and administration. EMC SAN Experience is a plus. • Experience with Windows Server 2003/2008/IIS hands on production deployment • Experience with Web-based Applications • Ability to work effectively in a team environment • Strong time management skills and multitasking abilities • Excellent technical communication and professional skills.
