

PERPETUAL TECHNOLOGIES, INC.

**PTI Job Posting Requisition**

**Job Title:** Software Applications Engineer/Programmer II

**Location:** Indianapolis, IN

**Salary:** \$65-\$75k

**Job Description:** Under limited supervision, assists in the analysis, design, programming, and modifications for software products and/or customer applications. Writes code and completes programming, testing, and debugging of applications. Finalizes forms, procedures, and documentation needed for installation and maintenance of application programs. Interfaces with marketing and customers to add new or custom features to company products. May use a wide range of disciplines such as distributed networking and databases, communications, and multiprocessing applications. Requires firm background in software engineering including analysis, design, implementation and verification. Typically requires a degree in computer science, and 2 to 4 years related experience. Requires familiarity with many of these technologies: DOS/Windows, OS/2, 32-bit Windows Programming, OLE Automation and OLE Control, Win32 Windows Device Drivers, Windows NT, C++, Assembler, GUI, Java, Java Script, HTML, DHTML, Active Server Pages, OLE DB, DCOM, and ActiveX. May be involved in the development/support of BIOS, drivers or system software and tools such as ICE, soft-ICE, and kernel debugger.

**Required Skills:** A minimum of a BS in Computer Science or related discipline • A minimum of 2 years professional experience in .Net C# or other high level programming language • Object oriented programming and design • A minimum of 2 years of professional experience with SQL and relational database concepts • A minimum of 2 years of professional experience with HTML and Java Script • Demonstrable proficiency in Windows and or Web programming • Ability to work effectively in a small team environment • Strong time management skills and multitasking abilities • Excellent communication and professional skills Specific duties include: • Work with product management to architect, create, and build web based solutions utilizing Microsoft technologies • Work effectively with a team of engineers to create web based solutions • Work with the System Architect in the design of applications • Design and engineer integration with 3rd party applications and technologies • Enhance and maintain existing product functionality We are looking for a Software Engineer who will work as a

part of a dynamic team in a rapidly growing company. While the role is truly one of individual contributor, a high degree of interaction and teamwork are required to be effective in the role. The qualified candidate will possess excellent technical skills and have good teamwork, leadership and communication skills. If you believe in success and making it happen, we'd like to talk with you. Please compare your background to the qualifications below and apply right away. Be sure to include your salary requirements so that we can fully consider your interest.
